PROFILE

Computer Technology graduate (JKUAT) and backend-focused software engineer with hands-on experience building REST APIs and services using Java, Spring Boot, and FastAPI. Currently deepening backend engineering skills through the Inuka Fellowship / E&M Tech House apprenticeship, working full-stack across Spring Boot, FastAPI, and Next.js. Comfortable across the SDLC — requirements, design, implementation, testing, and deployment — with additional experience in Agile delivery, team leadership, and frontend/Web3 development.

KEY SKILLS

- Languages: Java, Python, Ruby, SQL
- Backend & APIs: Spring Boot, FastAPI, Django, Ruby on Rails, REST API design & integration
- Frontend (supporting): React, Vue, HTML, CSS, Tailwind CSS, Bootstrap
- Databases: PostgreSQL
- Tools & Practices: Git/GitHub, Agile Scrum, Sprint Planning, Unit Testing, MVP Development
- Strengths: Team Leadership, Stakeholder Communication, Problem-Solving, Research & Innovation

EXPERIENCE

E&M Tech House — Apprenticeship (Inuka Fellowship Program) *Jul – Sep 2026*

- Working as a full-stack engineer on live projects, building backend services with Spring Boot and FastAPI alongside Next.js frontends.
- Worked as QA, testing a couple of E&M projects such as dealer finance, Boda Plus, and CRM. Using Playwright Using Playwright and curl commands to automate testing.
- Applying backend development fundamentals — API design, database integration, and clean code practices — under senior guidance.

Web3Clubs — Industrial Attachment *Jun – Aug 2025*

- Designed and developed frontend interfaces for decentralised applications (DApps) using React, Vue, Tailwind CSS, and JavaScript.
- Collaborated with blockchain engineering teams to integrate Solidity smart contracts with application frontends.

JHub, JKUAT — Attachee *May – Aug 2024*

- Led a technical project from concept through delivery, applying Agile project management practices in a real-world setting.
- Completed training in IP fundamentals, cybersecurity basics, and personal branding.

PROJECTS

Library Management System — Ruby on Rails

- Built a CRUD application with a PostgreSQL schema, database migrations, and test cases to ensure data reliability — directly applicable backend and database experience.

Mavuno Market Platform — Team Lead

- Led product vision and Agile coordination for a digital marketplace connecting farmers with buyers; owned UI design and stakeholder communication.

Aminia DApp

- Built the React.js frontend for a blockchain-based supply chain tracking application with Web3 integration.

EDUCATION

BSc, Computer Technology — JKUAT *Second Class Upper Division, 2026*

Maranda High School *KCSE B+, 2018 – 2021*

CERTIFICATIONS & TRAINING

- Microsoft Learn: 31 badges, including AI Fundamentals and Prompt Engineering
- JHub Trainings: IP Fundamentals, Cybersecurity Basics, Personal Branding
- Aviva Technologies Ltd: Intensive Web Engineering Program (10 months)
